

CFM MRV & IMO DCS

Compliance made easy

Monitoring, Reporting and Verification – Data collection with minimal effort and maximal outcome

To guarantee MRV & IMO DCS conformity, you have to record and analyse a variety of key figures. Reports about arrival and departure times, time spent at sea or the documentation of the bunker consumption provide the basis for the determination of emission factors of your vessels.

With CFM MRV & IMO DCS, you can capture this data fast and simple and provide it to your colleagues at the touch of a button. All required data can be entered directly on board, all further calculations are carried out automatically in the system, you only have to

forward the results. As with our other applications, we once again placed great emphasis on intuitive usability and clarity in the design of our module.

The user interface on board is reduced to the most relevant elements and enables the crew to work directly in a productive way – as usual for Cloud Fleet Manager, this can be accomplished without any training.

The timeline view provides a graphical overview of all reports of your fleet. This allows you to always keep on top of things.

Informative

Inform yourself about the reports of your fleet at any time.

Time-saving

All required data can be directly entered into the system on board.

As required

Available as a single app or integrated in Event Reporting.

Secured

All relevant key figures are captured and analysed in one system.

Go one step further

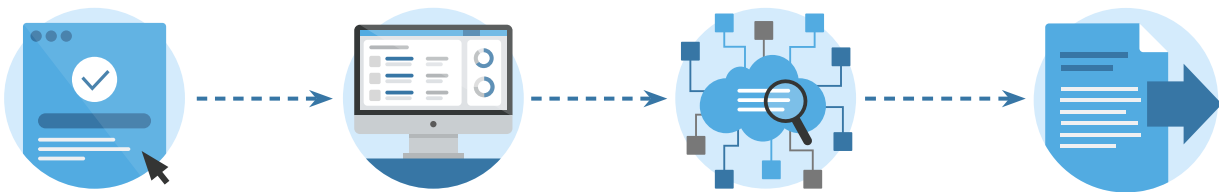

You want to monitor and sustainably improve the overall performance of your fleet? Then upgrade CFM MRV & IMO DCS to our full-featured CFM Event Reporting. With CFM Event Reporting you have a variety of additional key figures available such as times of anchorage and docking, machine-related data or bunker analyses – CFM MRV & IMO DCS module included.

Compliance can be so simple

We aggregate and prepare the data and send it to the verifier of your choice. While doing so, we comply with the requirements of the EU according to Regulation (EU) 2016/1927 – you simply forward the data without having to make any adjustments.

Key features

-  One module for both MRV and IMO DCS compliance
-  Data can be entered directly on board
-  Calculations are automatically carried out in the system
-  Available as standalone module
-  Distinctive IMO and MRV areas for a fast overview

1. Install Cloud Ship Manager on your vessels

2. The crew enters relevant information on board

3. Easily monitor the data of your entire fleet in the cloud

4. Send all IMO DCS data to flag state/RO | Send all MRV data to your verifier

About Hanseaticsoft

Hanseaticsoft was founded in 2009 by Alexander Buchmann. Buchmann and his team draw on several years of experience in the software department of a medium-sized shipping company in Hamburg, the third largest container harbour in Europe. In Hanseaticsoft, the idea of a new software concept was finally realised: giving enterprises access to new and efficient

technologies by means of intuitive software solutions. Today Hanseaticsoft has more than 60 employees. It is now part of Lloyd's Register Group, one of the world's leading providers of professional services for engineering and technology – improving safety and increasing the performance of critical infrastructure for clients in over 75 countries worldwide.
